

Spot on Lighting LED Retrofit Kit for Nulux Microlux

Microlux was created in the early 1990's ... the first high performance, small aperture, recessed, downlight. It was IC rated, trimless, and used halogen MR11 reflector lamps.

Within a few years newer models added the functionality of an adjustable lampholder for aiming and a more powerful and versatile light source, the amazing MR16 halogen reflector lamps.

The LED retrofit kit lampholder assembly and power supply are swapped with the existing parts and connected to the same wiring and dimmers.

LED Lampholder Assembly

Power Supply

Model: SOL-MU-R-°K specify color temperature: 2700 3000
